

**GROSS NET PROFIT ANALYSIS
FOR AMERICAN
TREASURE CHEST VENDING MACHINES**

FOR EXAMPLE 1 Treasure Chest Vending Machine
Sells 4 Toys per day x 30 days per month = 120 Sales per month
120 Sales x .50 Gross Net Profit per Sale = \$60.00 Gross Net
Profit per Month
\$60.00 x 12 months = \$720.00 Gross Net Profit per Year

NET WORTH VALUATION

Businesses are valued at approximately 3 times their Gross Net Profit per Year.
Based on that formula, if your Treasure Chest Vending Machines averaged
4 sales each per day each machine would have a resale value of \$2,800.00
Filled with product on location.

You would now have tripled your net worth in just 12 months plus have created a steady All
Cash income of \$720.00 per year per machine that requires very little of your time to service.
Plus all the tax benefits of owning your own home based business.

This is a good average to base all your future earning projections on. You can take these
projections and multiply them to give you the income you wish to generate. This will help
you choose the appropriate package of machines based on your budget that you will order

The Gross Net Profit Analysis above are based on a \$0.75 vend price less product cost of \$0.25 each
(66% Gross Net Profit per Vend).

These figures do not take into account transportation, labor, locating fees, (if any), taxes and any other
related business expenses. The above analysis is for demonstration purposes only and is not intended to be
in any way a guarantee. You may do better or worse.
